About us

ELVOSOLAR a.s. has reached significant success in field of „green energy“ on Slovakian and also on Central European scale. Back in 2009, as a subsidiary named ELVOD Inc. (which is the follower of successful company SAG ELEKTROVOD with more than 60 years of experience in the energetics) we installed and operated renewable energy sources with total power of almost 40 MW.

Besides national companies, we had different significant global partners like Samsung (from South Korea and Germany), European SolarLand Holding from Holland, Renergie – Raiffeisen from Austria or Contour Global (USA) in the projects we managed in the past.

At ELVOSOLAR we engage ourselves mainly with planning, construction, operations, management and maintenance of energy devices based on renewable and optimizing energy.

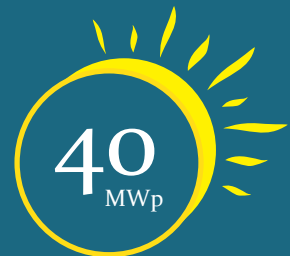

We are member of business group LUKA & BRAMER GROUP.

Photovoltaic power plants successfully built and connected since 2009

Running power plants nowadays

Overall installed power of all built and operated power plants

/// Utilization of renewable sources

Photovoltaics - conversion of sunlight to electricity, based on hybrid, on-grid or off-grid solutions

Photothermics - harnessing solar energy to generate thermal energy

Absorber - turning waste heat into coldness

ORC units - turning waste heat into electric power

/// Optimization of energy consumption

Energy saver - reduction in power consumption and extension of average time of equipments use

Green rooftops - heat isolation, lowering of dustiness and noise level, reduction of rain water drainage

Defectoskopic test - comprehensive activities non-destructive testing

/// Key sectors

For its clients and business partners, ELVOSOLAR a.s., represents the access to verified technologies, experience in project implementation and financial stability.

● Private sector

Manufacturing companies, office buildings, banks, hotels, ware-houses

Households

Family houses and apartment buildings

Public sector

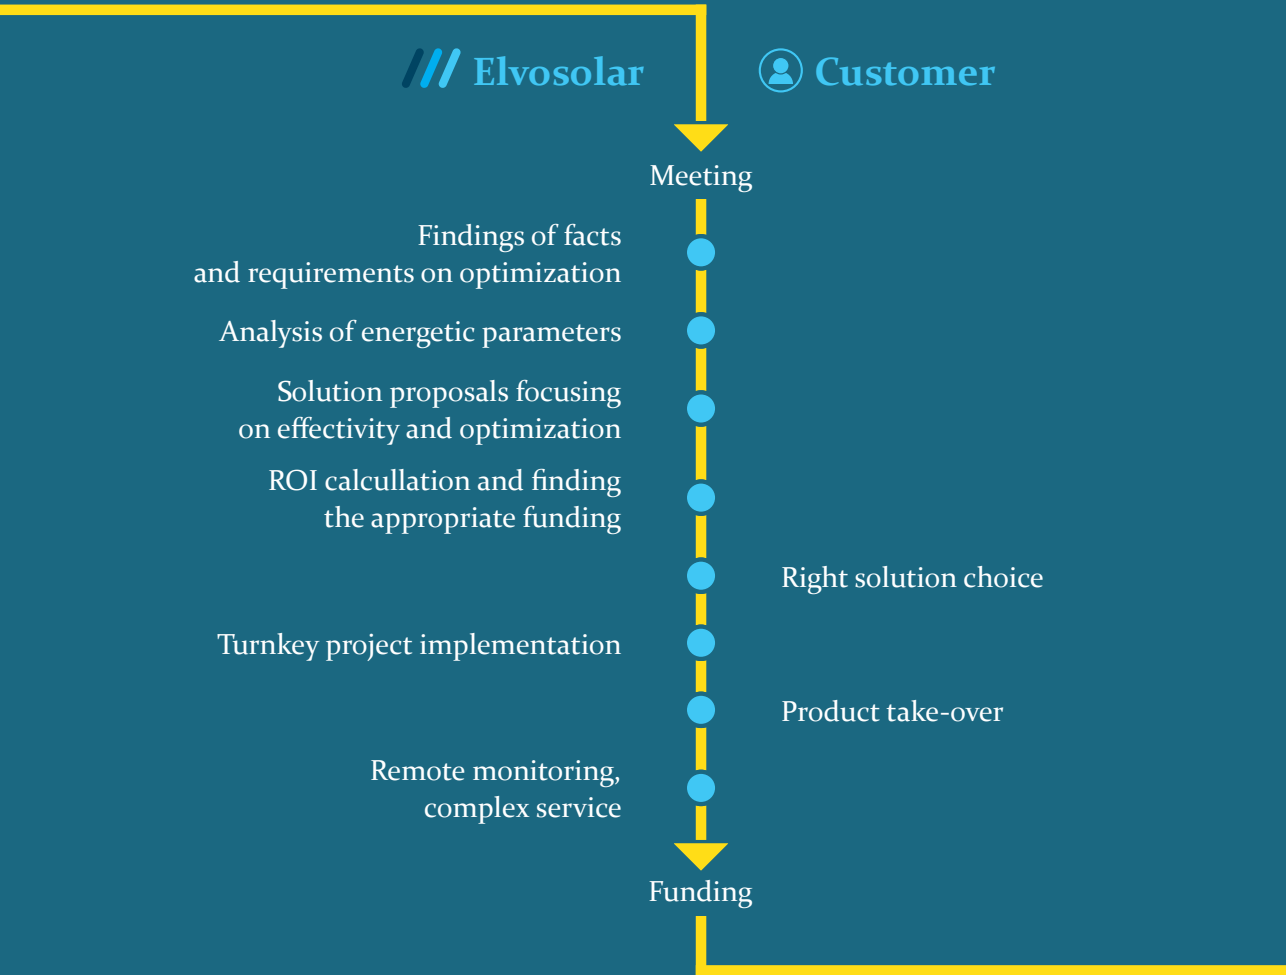

Schools, hospitals and administrative buildings

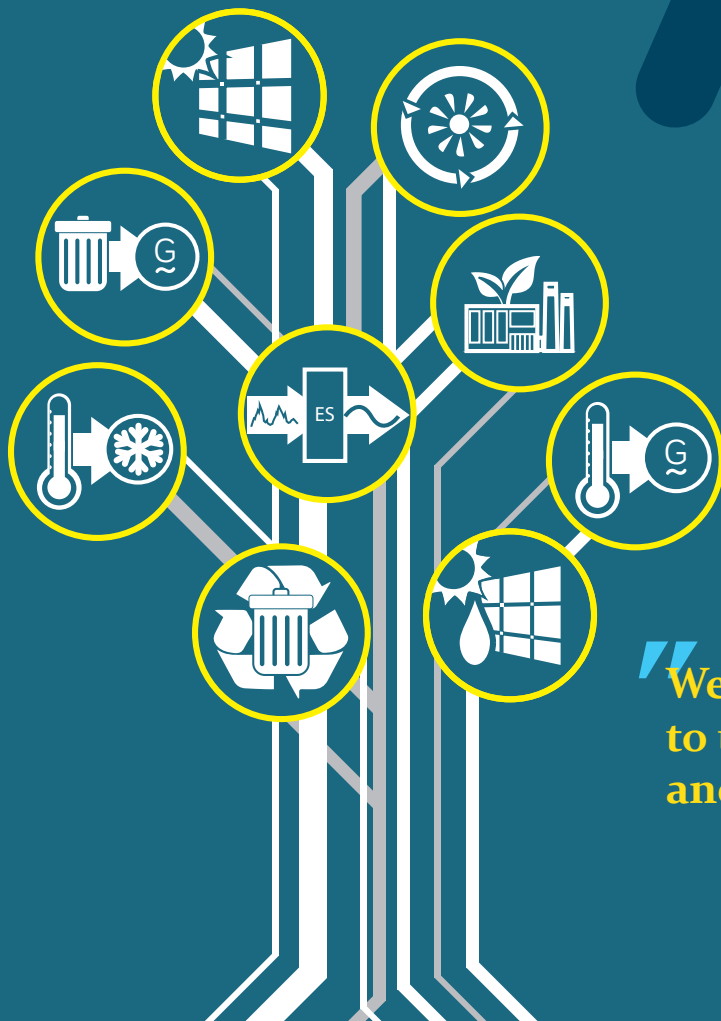

Services for you

- Right solution proposal focused on ROI
- Energy audit with proposal of economic measures
- Optimization of operation parameters of power generating equipment
- Elaboration of project documentation
- Turnkey project implementation
- Operation and equipment maintenance with complex service
- Remote monitoring connected to dispatching
- Maintenance and repairing of LV/HV distribution points
- Necessary reviews and reports according to current legislation and technical standards
- Production diagnostics, recording and elimination of disturbances, reporting
- Funding

Business model for energy optimization

**“We are opening doors
to the renewable
and optimizing energy.”**
